

What's Out There?

POWER CRUISER

The SILENT 55 won the “Best of Boats Award” in the category “Best for Travel”. Generally, she can easily be handled by two people, making the SILENT 55 ideal for families cruising with or without additional crew.

Welcome to the world of solar powered noiseless cruising! Two electric motors allow you to seamlessly glide towards the horizon, providing high levels of comfort and making this option suitable for long-term economic cruising. Furthermore, the solar-electric drivetrain features unprecedented levels of reliability and security with almost zero maintenance work needed. There is an 8-year warranty for the battery banks and a 25-year warranty for the solar panels. Also included is a lifetime warranty for the electric motors.

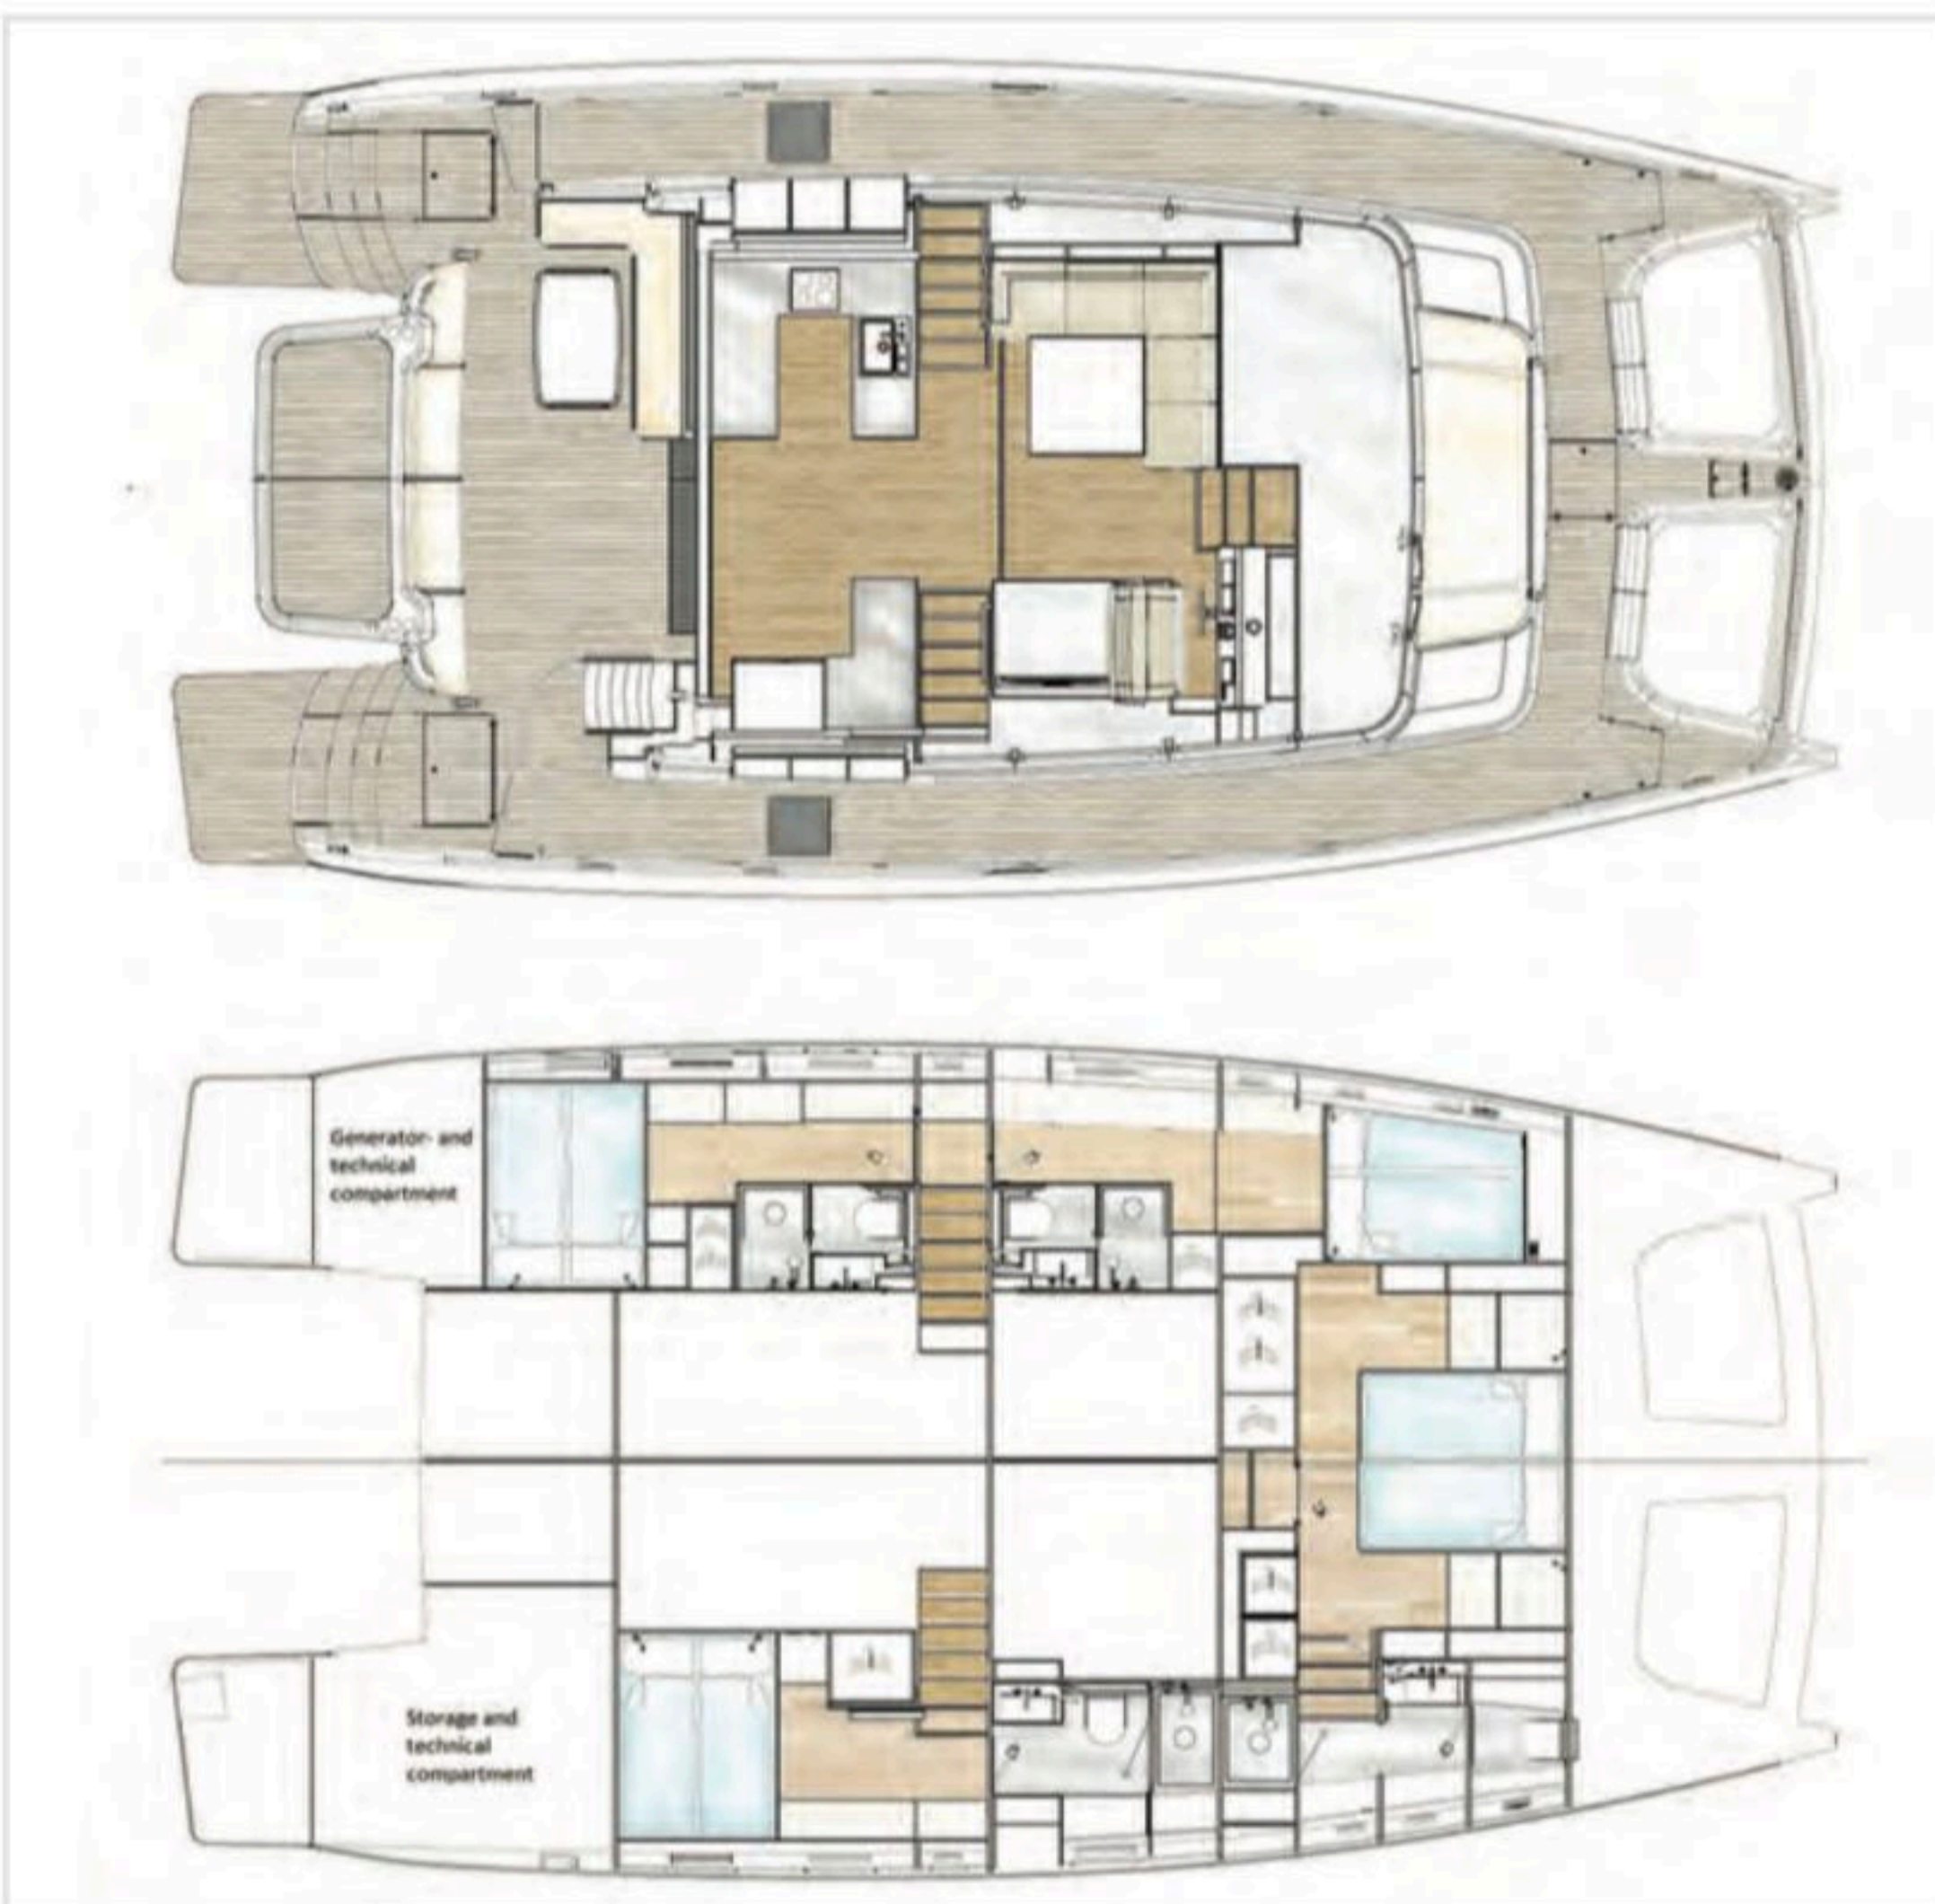

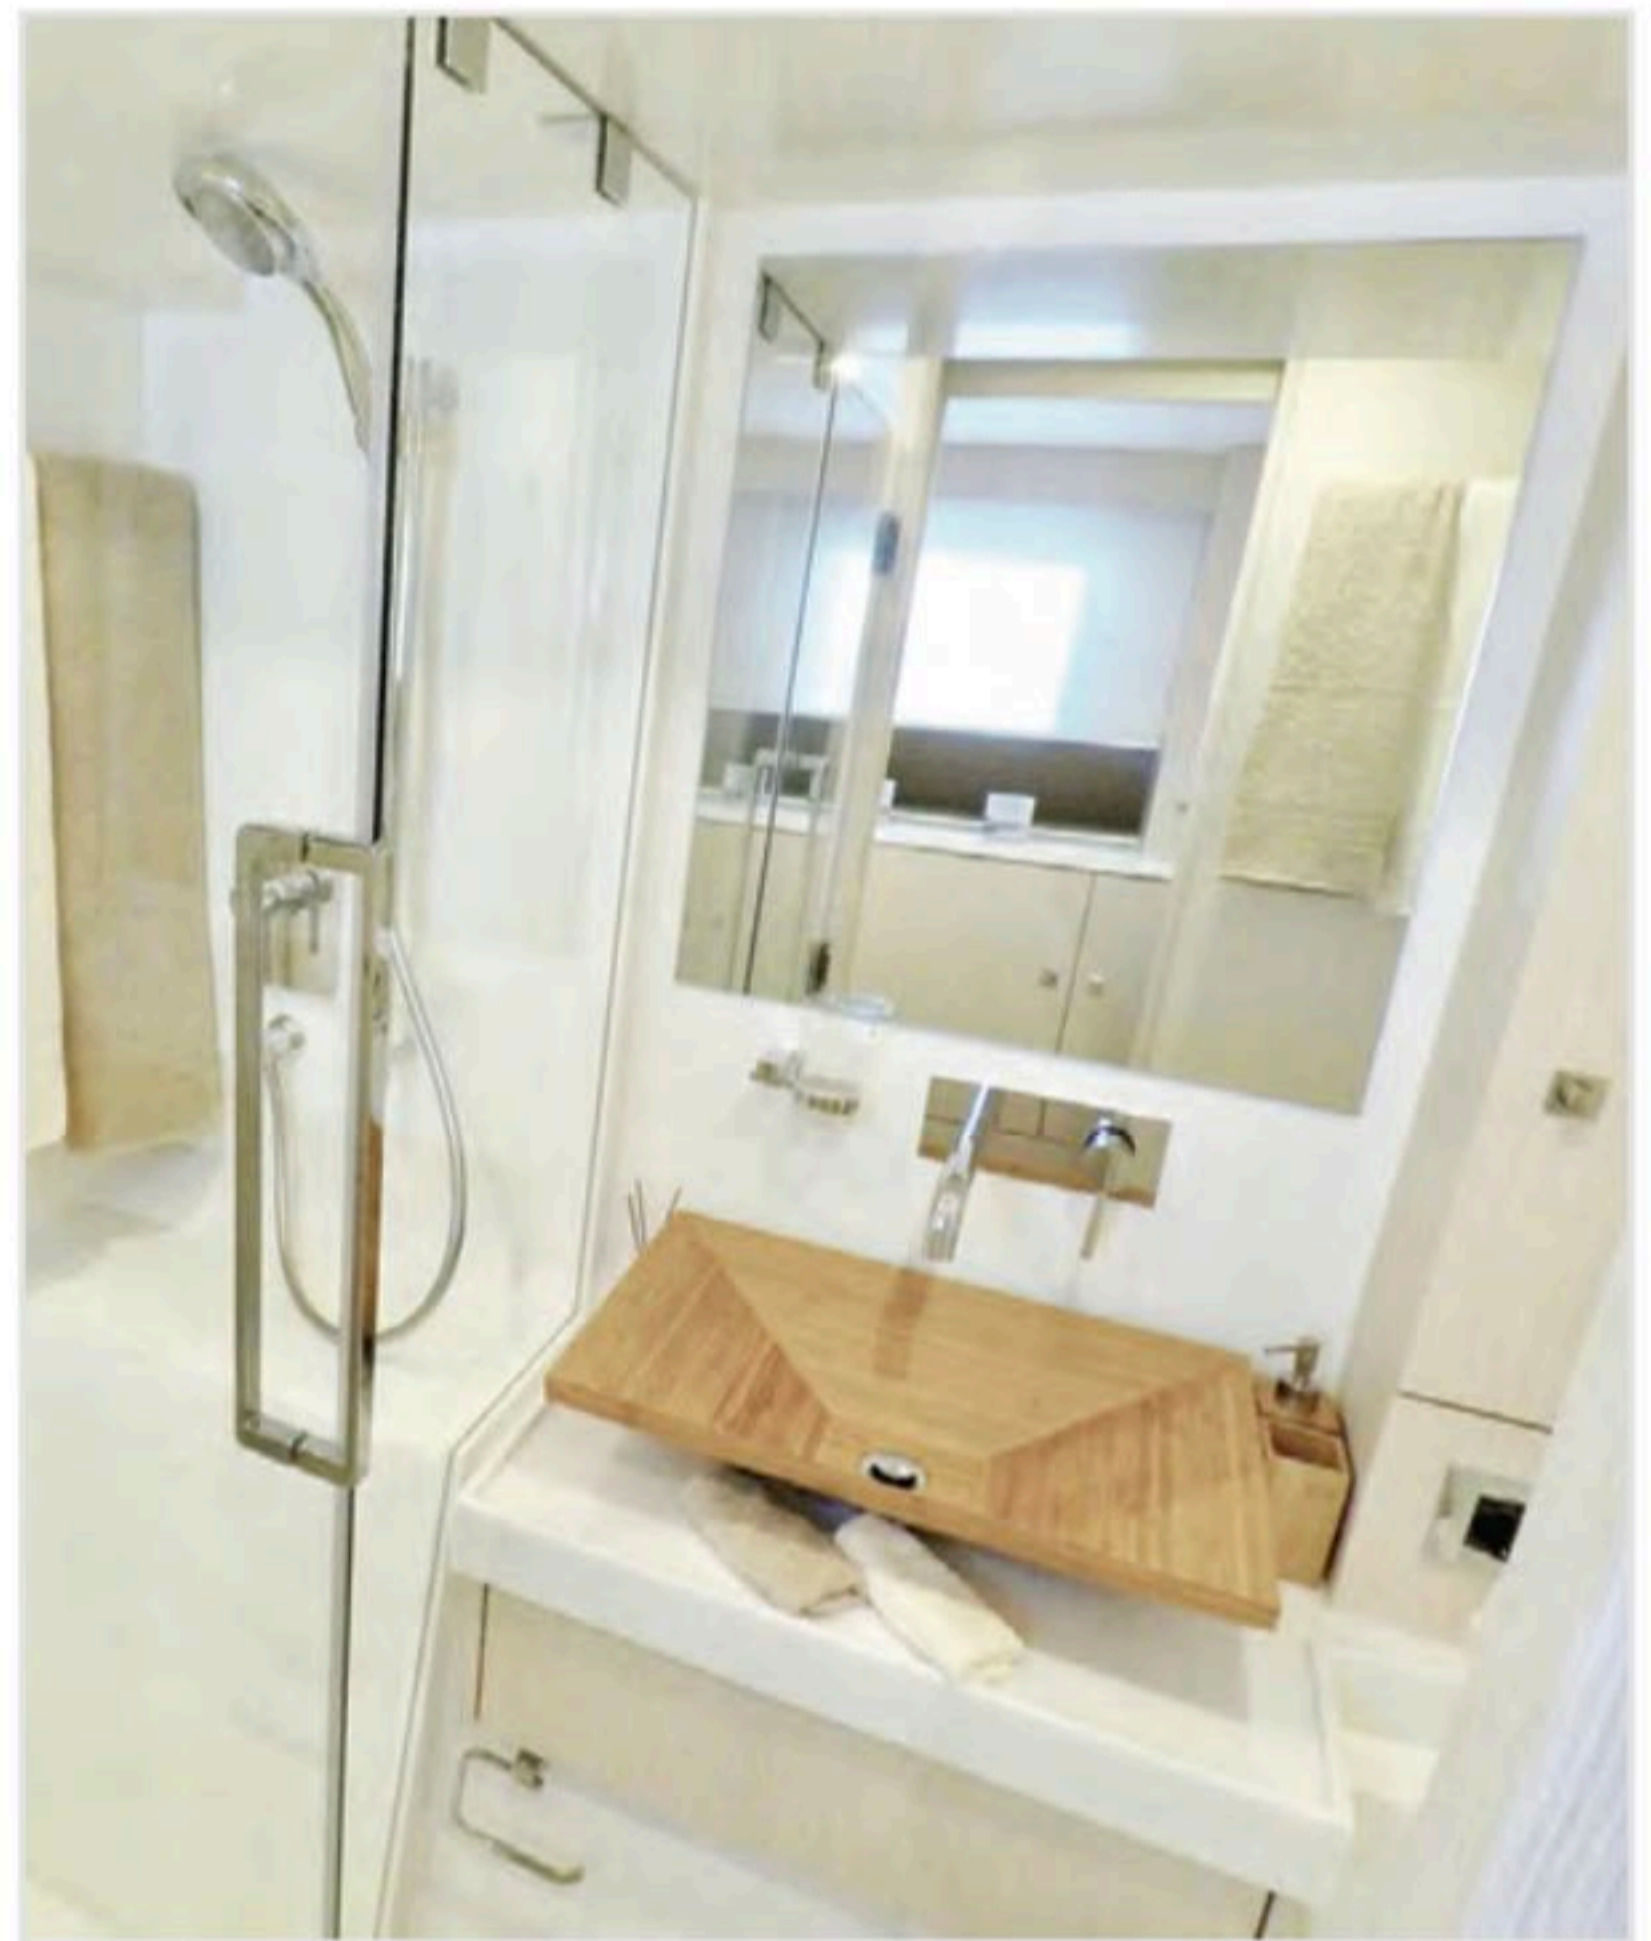

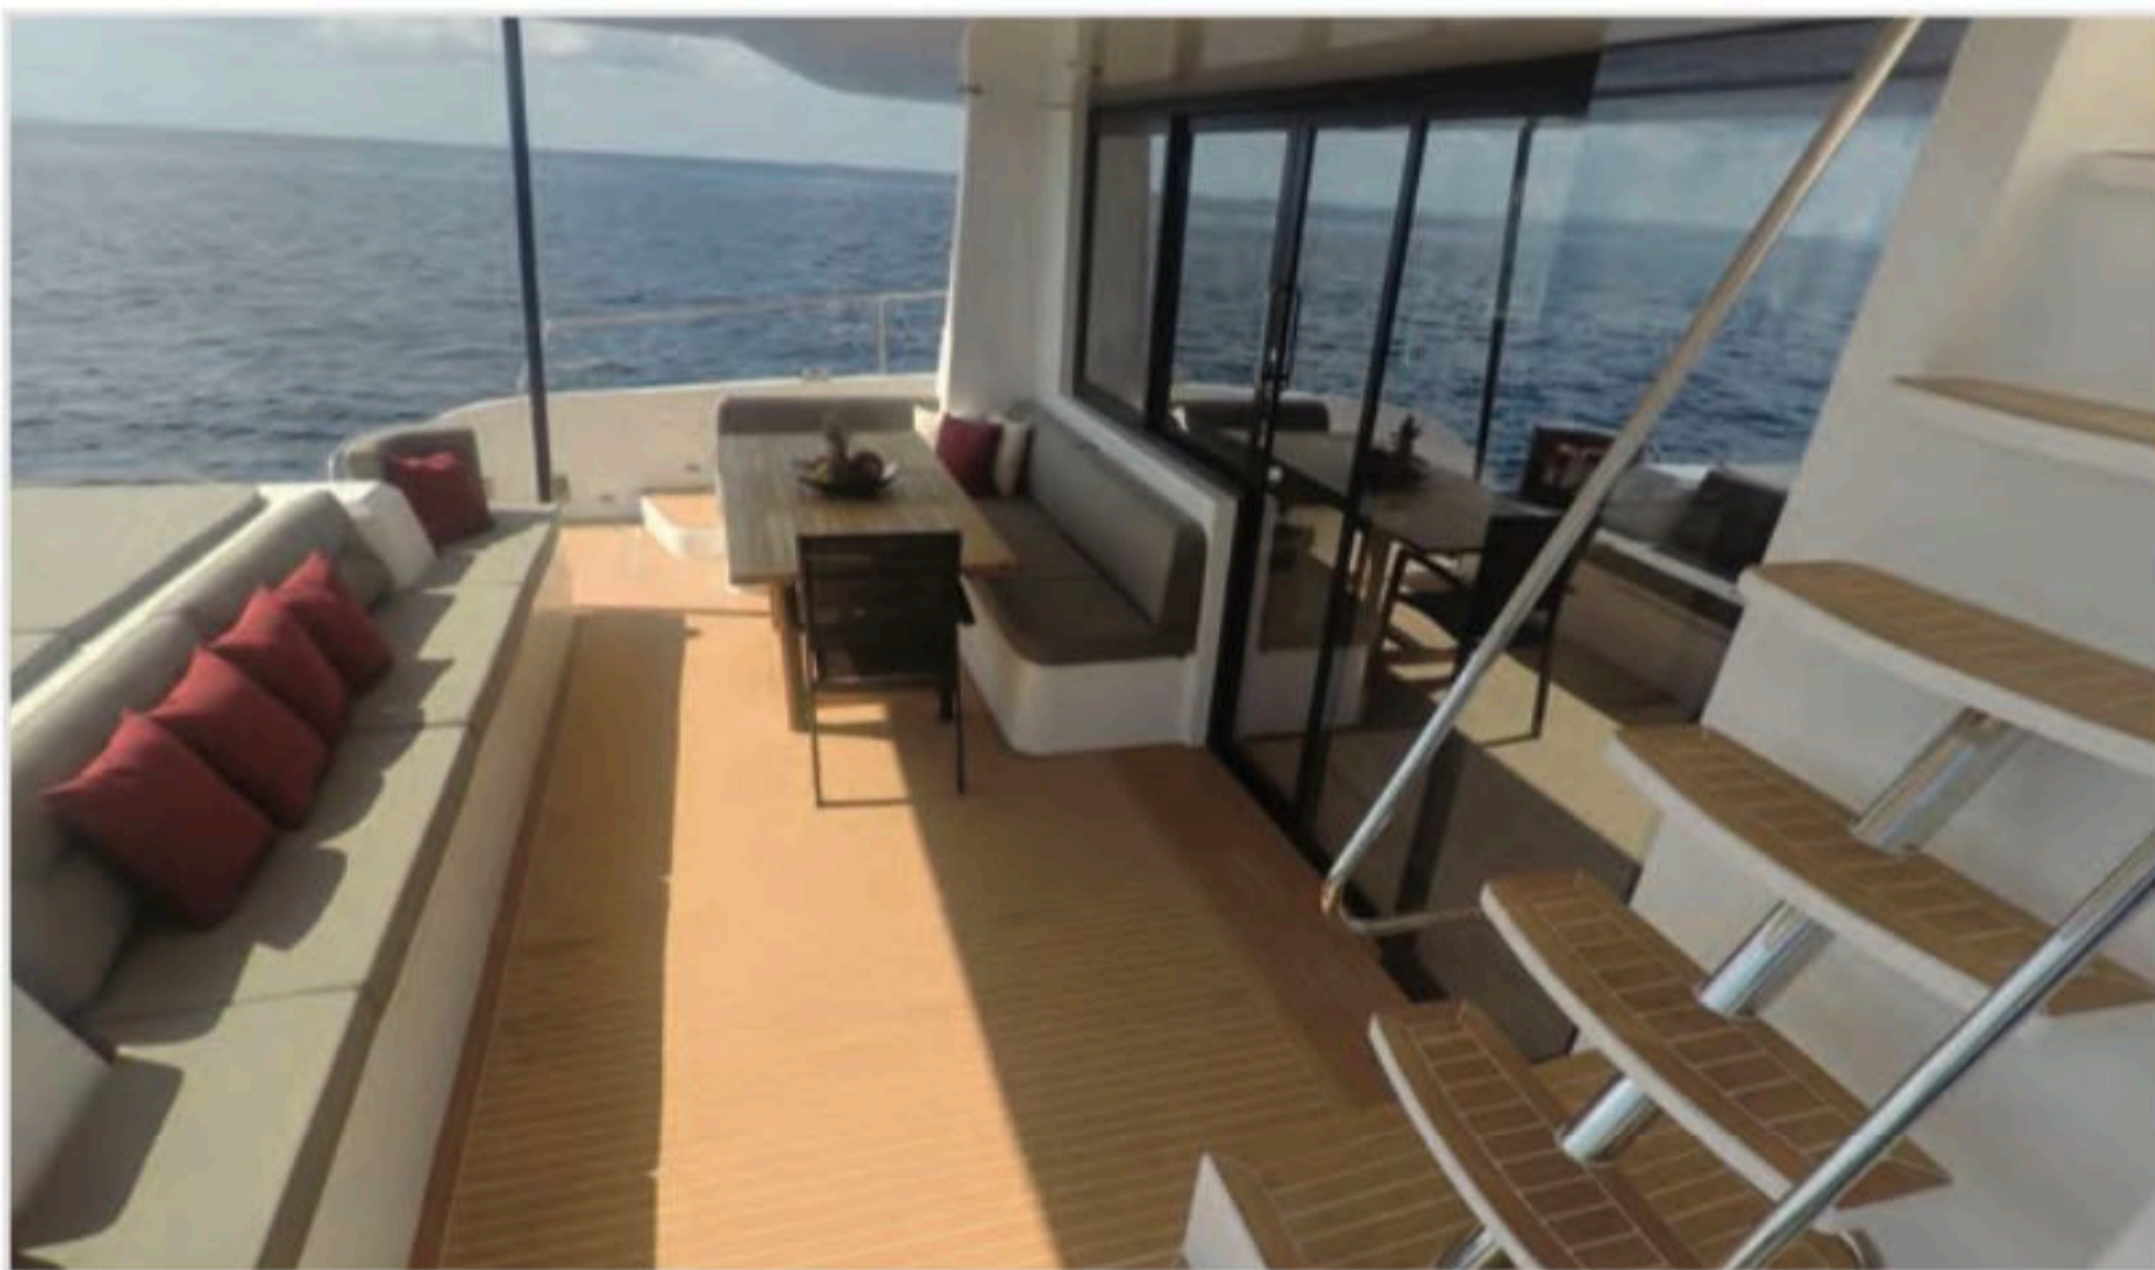

This cruising designed vessel is 100% solar powered with an unlimited cruising range using noiseless and fumeless propulsion. This system is considered one of the safest marine propulsion systems available.

This futuristic vessel is tried and tested over many sea miles, and is a look at the very possible future of power-cruising catamarans. The spacious interior and the silent running make this boat something that cruisers might want to consider.

The folks at Silent Yachts have been working on this technology for years, and they seem to have found the right setup. If you'd like more info, you can find it at www.Silent-Yachts.com.
